EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification:

On page 1, line 1, "SPECIFICATION" has been deleted.

On page 1, line 2, "NAME OF THE INVENTION" has been deleted.

On page 1, line 15, "revolution" has been changed to -- revolutions --.

On page 1, line 22, -- a -- has been inserted after "by".

On page 1, line 27, "of" has been deleted.

On page 1, line 28, "examples" has been changed to -- example --.

On page 1, line 32, -- a -- has been inserted after "by".

On page 2, line 8, -- a -- has been inserted after "by".

On page 3, line 4, -- a -- has been inserted after "by".

On page 9, line 5, -- a -- has been inserted after "by".

On page 11, line 17, -- a -- has been inserted after "by".

On page 18, lines 15-16, "it system that" has been deleted.

Art Unit: 3745

On page 20, line 1, -- a -- has been inserted after “by”.

On page 21, line 5, -- the -- has been inserted after “by”.

In the Claims:

In claim 1, line 1, -- the -- has been inserted after “comprising”.

The above changes to the specification and claims have been made to correct obvious informalities.

Reasons for Allowance

The following is an examiner’s statement of reasons for allowance:

The instant application is directed towards an unobvious improvement over the invention disclosed in Japanese Patent Publication 2000-110,560. Japanese Patent Publication 2000-110,560 discloses a fan revolution speed control method substantially as claimed, comprising the steps of detecting an actual temperature of a cooling target fluid that is to be cooled by a cooling fan 17, determining a target fan revolution speed based on the difference between the actual temperature detected and a target temperature by means of a proportional integral control unit 37-39, and controlling the cooling fan based on the target fan revolution speed. The improvement comprises restricting an accumulation of integral elements at a negative side when performing integration by the proportional integral control unit. The PCT Publication WO

Art Unit: 3745

2005/014987 lists Japanese Patent Publications 53-079,175 and 60-193,010 as “Y” references against the claims. Both of these references disclose that it is known to restrict accumulation of integral elements at a negative side when performing integration by a proportional integral control unit. However, neither of these references pertain to fan speed revolution speed control, and do not disclose a target fan revolution speed being determined based on the difference between an actual temperature detected and a target temperature by means of a proportional integral control unit, and controlling the cooling fan based on the target fan revolution speed. There is no reason or motivation to apply the teachings of Japanese Patent Publications 53-079,175 or 60-193,010 to the fan revolution speed control method disclosed by Japanese Patent Publication 2000-110,560.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Furuta '370 and '368 are cited to show fan speed control methods based on the temperature of target fluids

Art Unit: 3745

Yamamoto is cited to show a fan speed control arrangement where a target fan speed is set according to a detected temperature of cooling fluid.
